

# Eco-coloring system CC Brow True & Natural

## How to use

Step 1. Remove makeup. Clean the eyebrow hair with True & Natural Cleansing Brow Foam.

Step 2. Put the henna out of one capsule into a glass cup and add True & Natural Henna Mixing Water. Stir the mixture thoroughly to make it homogeneous.

Step 3. Apply the mixture in a thin even layer strictly in the desired shape of the eyebrows. If needed, you can apply another 2-3 layers after the previous layer has completely dried.

Step 4. Wait until henna dries completely (from the beginning of the dyeing it takes around 15 - 20 minutes).

There are several ways to remove henna:

Method 1: It is strongly recommended to remove henna with Squalane True & Natural 3in1 Oil. Oil application provides long-lasting result, enhances the color and stimulates eyebrow hairs growth.

Method 2: Soften the henna on eyebrows with a cotton pad with Squalane True & Natural Oil, and then remove the residue with a brow brush.

Method 3: Remove henna from eyebrows with a cotton pad wetted in water (with a drop of oil added)

Do not remove henna until the layers dry completely.

Do not use henna on damaged skin.

**PLEASE PERFORM AN ALLERGY TEST 24 HOURS BEFORE COLORING.**

For a long-lasting result, it is recommended to:

- Avoid water contact of the eyebrow area during the first 24 hours after the procedure;
- Apply Squalane oil to the eyebrows each time before washing the face;
- Try to avoid visiting saunas and solariums first days after the procedure.

Step 5. Style the eyebrows with CCBrow True & Natural soap  
Styling with Soap will add volume and fix the hairs in the desired position, providing perfect and natural look.
